About COVID-19 Infection of Our Employee

It was discovered that one of the employees working at our hotel is infected with COVID-19 on June 5, 2021.

We reported to the healthcare center under jurisdiction at once and received a remark that there is no special problem for continuing business.

At our hotel, employees measure body temperature before coming to work, wear mask, wash hands and disinfect hands and fingers with alcohol thoroughly to prevent infection. Despite this, we caused guests and various related parties so much concern this time. We sincerely apologize for this.

We implemented disinfection and cleaning inside the building immediately, we knew this, and already finished.

We place top priority on safety and reassurance of guests and employees and try hard to prevent infection spread in cooperation with related institutions. We cordially ask for your understanding and continued patronage.
